

KÄRCHER

FOR A CLEAN FARM.

Complete cleaning solutions for all areas in agriculture

PROFESSIONAL | AGRICULTURE

HELPING YOU KEEP YOUR FARM CLEAN & PRODUCTIVE.

People working in agriculture were one of the first occupational groups to recognize how much they could benefit from using pressure washers on their farms, and the first to use them. More than 50 years later, an almost traditional partnership has blossomed and everyone continues to profit from it in new ways. Today, the Kärcher system provides all the necessary machines to complete your diverse cleaning tasks in an exemplary manner.

You can trust Kärcher to achieve excellent cleaning results, outstanding sustainability, superior efficiency and provide you with reliable hygiene solutions whilst being very environmentally friendly. As partners, we have found the right solutions to increasing cleaning needs in agriculture, time and time again. This is something we want to and will continue to do.

MEETING CLEANING EXPECTATIONS.

Cleaning all machinery

The Kärcher system offers effective cleaning with a wide range of accessories and suitable cleaning agents for several applications. Your Kärcher pressure washer and detergents effortlessly remove the most stubborn grime as well as oil and grease residue in no time at all and use very little water.

High performance around the clock

Your agricultural machinery has been designed to last and to be efficient. By maintaining and cleaning your machinery regularly, you ensure that everything is kept running in the long term.

Coarse cleaning and disinfecting

Conforming to cleaning and hygiene standards is an indispensable component in professional animal husbandry. Our cleaning systems for cleaning animal accommodation ensure quality and great operating results.

Well-maintained exterior surfaces

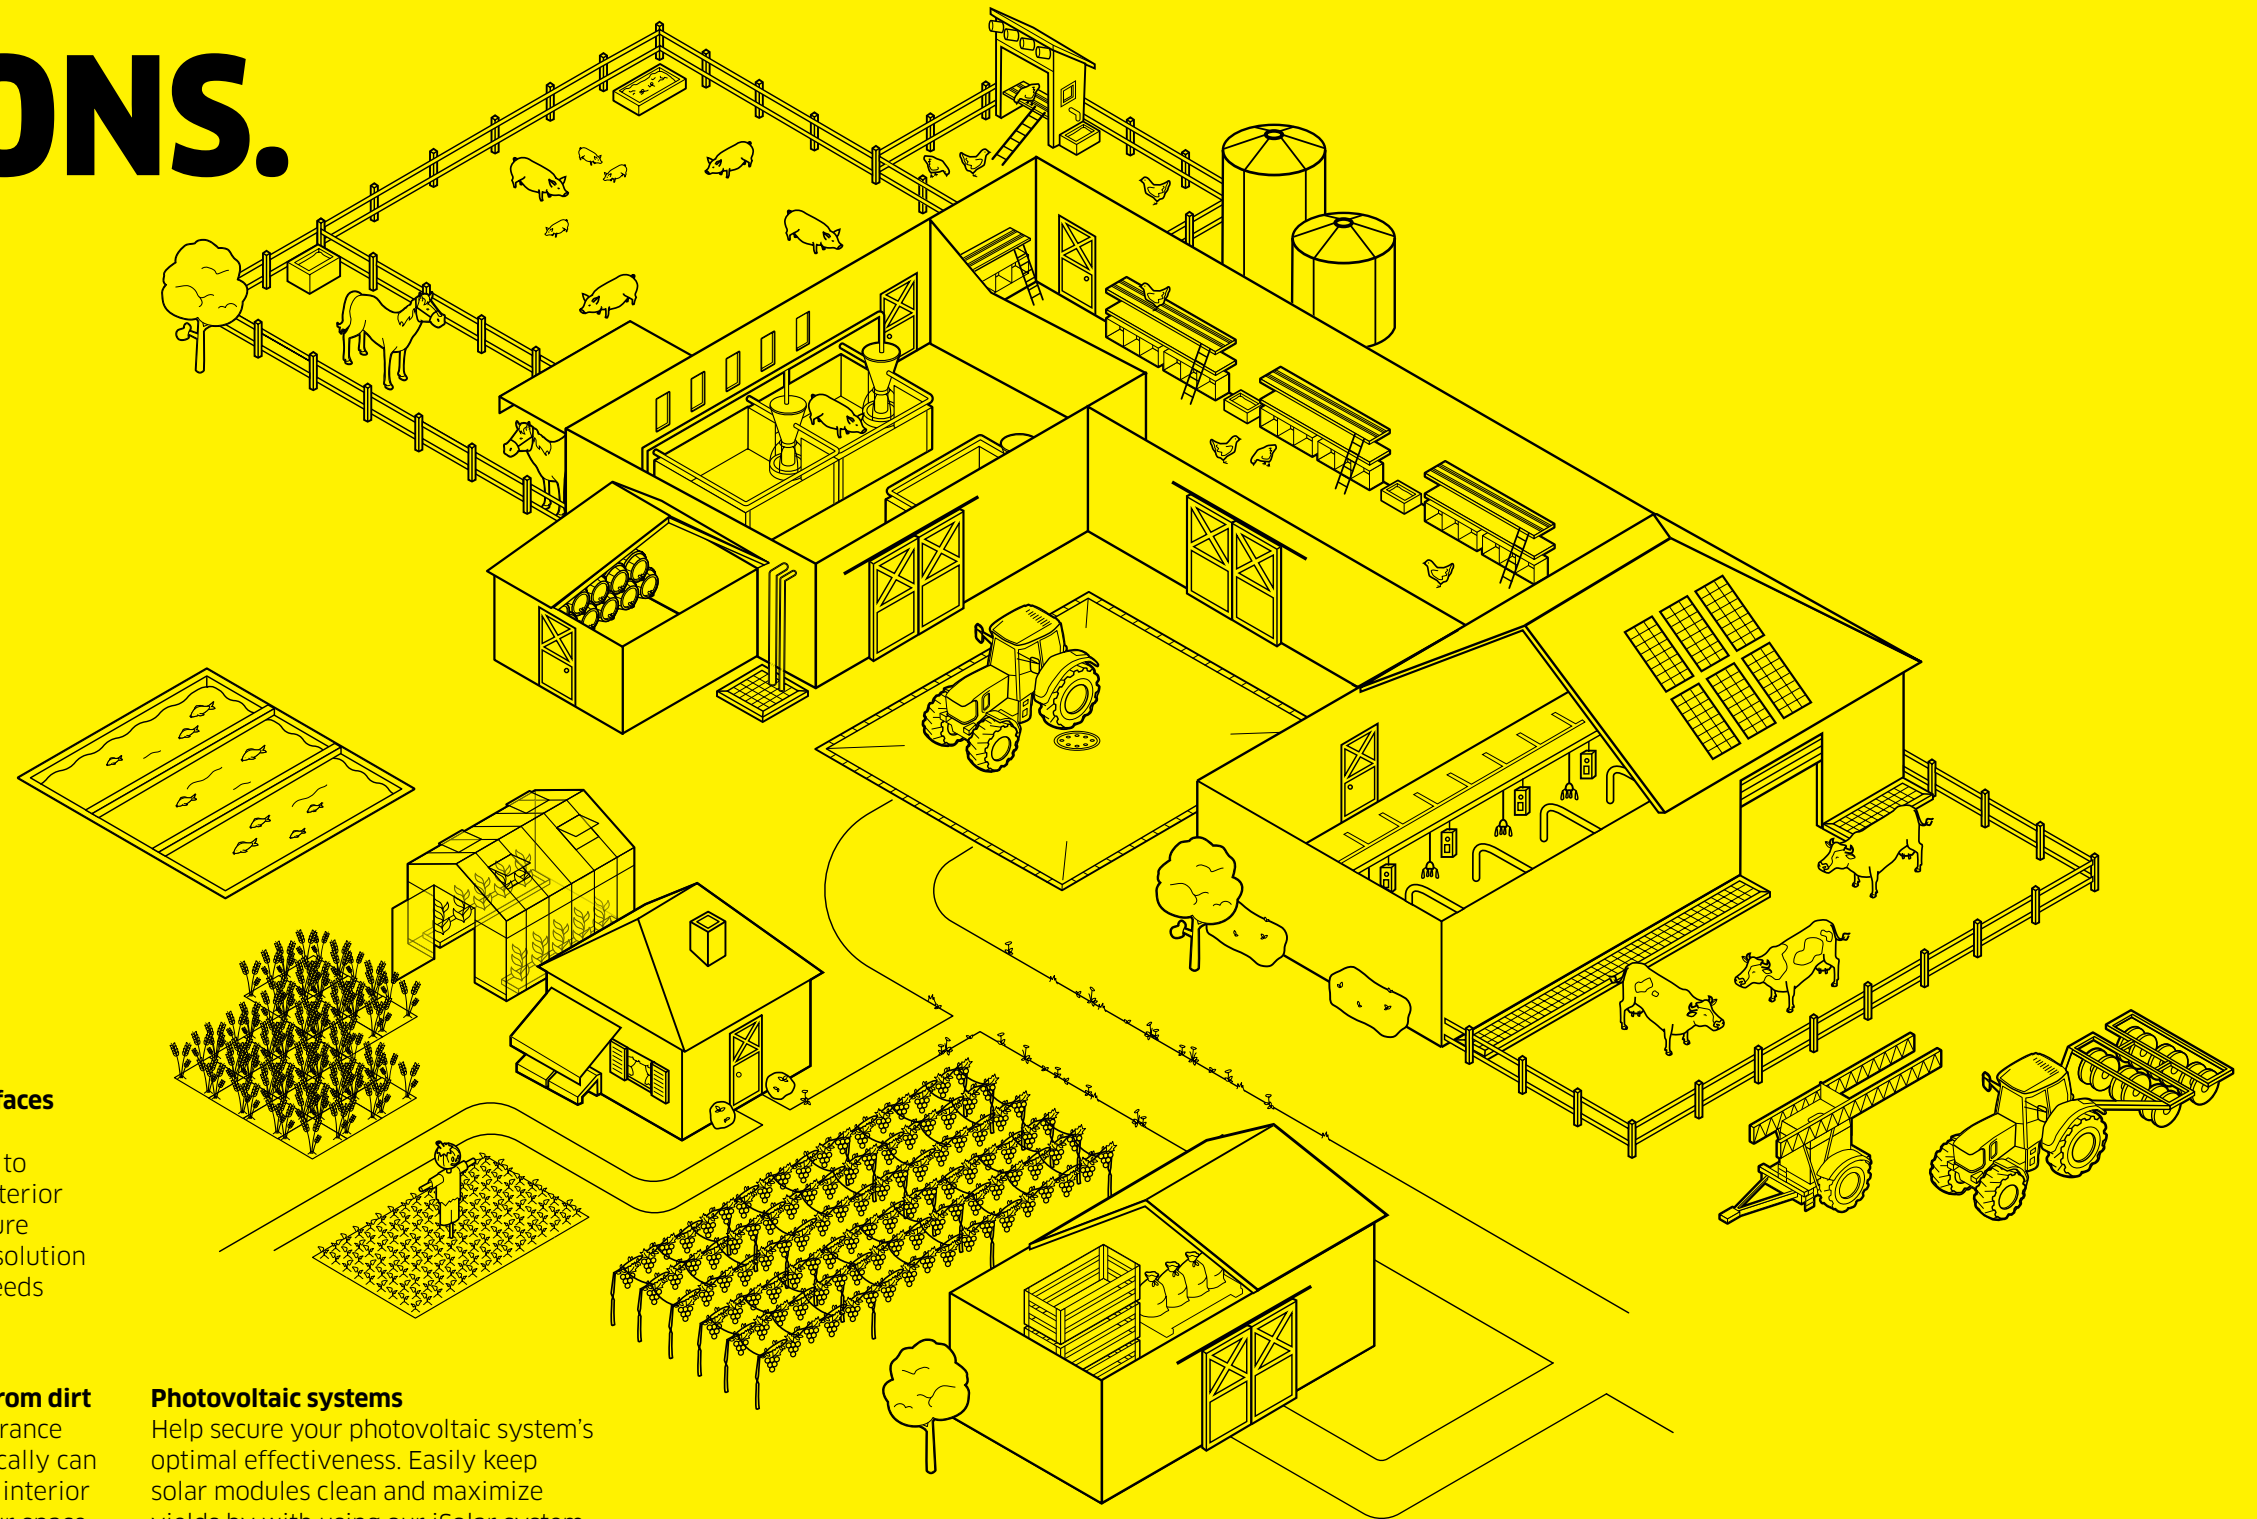

You need efficient and highly effective cleaning technology to remove stubborn dirt from exterior surfaces. Our hot water pressure washers provide a long-term solution for effortlessly eliminating weeds from all tracks and surfaces.

Protect your interior spaces from dirt

Cleaning your outside and entrance areas regularly and systematically can reduce the ingress of dirt into interior spaces by 80%. This keeps your space protected and saves you a lot of time.

Photovoltaic systems

Help secure your photovoltaic system's optimal effectiveness. Easily keep solar modules clean and maximize yields by with using our iSolar system with cleaning them regularly.

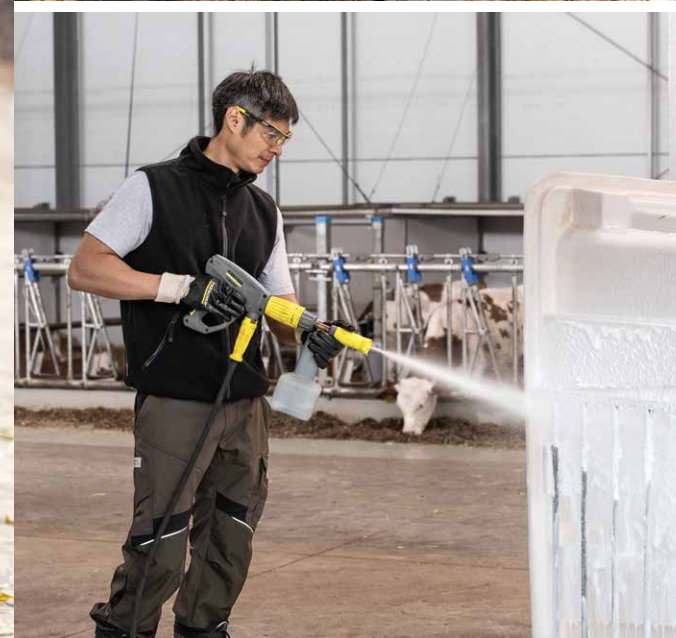

OPTIMAL CLEANING FOR ANIMAL HOUSING.

Conforming to hygiene standards is an indispensable component in professional animal husbandry. Our systems for cleaning animal accommodation ensure quality and great operating results.

Manure management and complete sanitization in your animal pens and containment areas are struggles we know you deal with on a daily basis. Hygiene is of the utmost importance in modern animal accommodation, especially on pig and poultry farms. Time is also always of the essence when

relocating animals. The quicker and more effectively you can clean the animal accommodation, the more work time you save. Tests have shown that you can achieve maximum cleaning power in minimal time using our hot water machines and the special Kärcher cleaning agents for cleaning animal accommodation.

Hot and cold pressure washers.

Use a hot water pressure washer to disinfect floors, walls, pens, holding areas, and stalls. You'll be able to clean faster than ever and disinfecting calf sheds will be a breeze. Easy to maneuver, Kärcher's cold water pressure washers are designed for use in areas where dirt accumulates every day.

Push sweepers.

A quick sweep of the barn: time-consuming and laborious with a broom, it takes no time to sweep up debris with our push sweepers, without any effort and without bending over.

Wet/Dry vacuums.

Our wet/dry vacuums are easy to operate and is built tough for your professional needs. It even features a self-cleaning filter and 17.2 gallon container capacity.

Do not cut corners.

After all, you usually work systematically. So you know how successful doing this is. The Kärcher system simply allows you to achieve more. We offer a range of universal and special accessories, which make your high-pressure cleaner as effective as possible.

Kärcher cold water high-pressure cleaners in various performance classes clean animal accommodation of any size quickly and thoroughly. To combat bacteria and disease, our hot water machines like the Mojave Series are the optimal choice.

Mojave Series

SECURING YOUR YIELDS.

Where there is milk, bacteria should not stand a chance. This is why our pressure washers and cleaning agents are the perfect choice for achieving maximum biosafety in milking parlors and dairies. This not only secures yields and income, but also protects the health of people and animals.

You are well prepared for day-to-day cleaning tasks with our cold and hot water pressure washers. Together with the right accessories and cleaning agents, our machines provide the efficiency and reliability you need for these critical tasks, and more. This is because they also save you a lot of precious

work time and therefore money. The milking parlor is a tough area to keep clean, especially with some farms handling round the clock milking. Sanitary conditions are essential for quality milk, use pressure washers and disinfectants you can trust - use Kärcher.

Hot water pressure washers.

Elevated temperatures significantly reduce bacteria. Our pressure washers provide a superior level of sanitation by combining heat with high pressure, making them ideal for milk parlors where hygiene is paramount. The intense heat not only enhances the cleaning power but also breaks down stubborn contaminants, leaving surfaces impeccably clean and sanitized.

Foamer Max.

Quick, easy and effective cleaning with our Foamer Max is ideal for deep cleaning. When faced with organic deposits, such as excrement and remaining fodder. They also save a lot of time and water to assist in the goal of achieving first-class cleaning.

Cold water pressure washers.

Compact design and high flow rates of our cold water pressure washer make them particularly effective for pre-cleaning tasks. Their efficient and streamlined design allows for easy maneuverability, even in tight spaces, while the powerful flow ensures that even the most stubborn dirt is quickly removed.

Cleaning agents.

Vital Oxide is used to disinfect and sanitize all areas traversed by animals, and kills 99.999% of bacteria. It can be applied directly, requires no rinse and is safe for humans and animals. Use our Building Interior/Exterior Cleaner through a pressure washer to clean floors and equipment between milking.

HDS Special Class

Kärcher's HDS Special Class electric hot water pressure washer is ideal to use indoors. Simple to operate with a large single-button selector dial. You can quickly disinfect equipment, floors, and walls between milking.

KEEP THINGS RUNNING.

You use powerful machines on your farm – a considerable investment. You need to be able to rely on every single machine. Every day, for the whole season and for many years to come.

Keeping the farm equipment you use up and running is extremely important for protecting your investments and keeping the farm going. Our effective cleaning solutions, accessories and cleaning agents offer everything you need to do exactly that. Regular cleaning not only keeps your equipment running it

protects the fields. Cross contamination between fields is a liability. Use our portable pressure washers and detergents to keep your vehicles, tractors, and equipment free of contaminants and running season after season.

The high pressure and flow rate of our cold water pressure washers remove even the heaviest of dirt quickly and thoroughly. Our hot water pressure washers are even quicker, use less water, and are more effective in doing so. Wet and dry vacuum cleaners are your indispensable, versatile aids for fighting dust, wet dirt and fluids everywhere on the farm. Our special cleaning agents gently clean your entire vehicle fleet and keep them protected for long periods of time – for sustainable protection and value retention.

It is easier when things are clean

In agriculture, driver cabs tend to get dirty quickly. Yet you can get the working environment clean again in even less time: Kärcher wet and dry vacuum cleaners vacuum dust, wet dirt and fluids easily and thoroughly.

YOUR FARM'S BUSINESS CARD.

Clean tracks and farm areas do not just make work easier, but they also visually reflect how you operate your farm.

The face of agriculture is changing and this means that farmers' requirements are changing too. Even marketing and tourism are key points of interest now and call for cleaning solutions of their own.

Keeping barns and outbuildings clean is not your first priority come harvest time. With Kärcher's equipment solutions you can scrub floors, strip paint, and sweep up debris quickly and efficiently.

If you run a farm market, hold festivals or holidays on the farm, you are faced with cleaning tasks like caring for hard flooring, HACCP hygiene requirements, and more. We support you with effective and efficient cleaning solutions.

Vacuum sweepers.

From small walk-behind sweepers and larger ones with traction drives to ride-on sweepers – we are positive that you will find the right machine for your needs. You can choose from battery-powered or fuel-powered ones and thanks to their suction capabilities, dirt is removed without leaving dust and fed into large catch pans. They are so effective that you will soon forget where you left your broom.

Scrubbers.

Farms often have large areas that accumulate dirt, mud, manure, and other organic matter. Scrubbers are designed to handle these tough cleaning jobs efficiently, making the process quicker and less labor-intensive.

Wet and dry vacuum cleaners.

They are powerful, easy to operate and available with lots of extremely versatile accessories that can be used to clean shelves, packaging and tucked away crevices.

BD 35/15 C Bp Classic Scrubber

Kärcher's scrubbers are optimal for floors. Our BD 35/15 C Bp Classic is perfect for scrubbing congested and high traffic areas like hallways, bathrooms, and small shops. It reliably removes debris, resulting in gleaming, streak-free floors.

CLEANING MODERN FARMING TECHNOLOGY.

Nowadays there are countless technical systems and machines to support farmers in their work – the larger the farm, the greater the importance of digitalization to achieve financial success.

Modern technology offers such high levels of precision and efficiency, the levels of cleanliness and hygiene must also increase accordingly. Since machines and systems must be operational at all times, it is vital that downtimes are prevented. Moreover, high levels of investment demand ongoing value retention – even to be able to sell old machinery at a profit.

This applies for animal husbandry as well as for arable farming where, alongside efficient working practices, sustainability plays an important role. The supporting technology behind it all is expensive and delicate. To ensure that it remains working, and to protect the investments made in it, cleaning it properly is imperative.

Pressure washers.

Every farm typically includes a high-pressure cleaner in their cleaning tools. When cleaning near hydraulics or electronics, it's essential to increase the working distance and reduce both water volume and pressure. A hot water pressure washer can be especially useful, as it loosens dirt faster and allows surfaces to dry quickly. Additionally, when cleaning digitally controlled ventilation systems, such as sensors in air ducts and holding areas, it's important to clean them regularly, using low pressure and maintaining a safe distance to ensure accurate readings.

Vacuum cleaner.

Regular interior cleaning benefits both people and equipment. Thorough vacuuming of the cab prevents avoidable downtime, and protects electrical, electronic, and hydraulic systems from damage caused by dust, dirt, and moisture.

Wet / dry vacuum cleaners.

Feeding systems use highly sensitive equipment, and dry fodder dust poses a major issue by settling everywhere and absorbing moisture. A powerful wet / dry vacuum cleaner is ideal for removing these harmful fine particles.

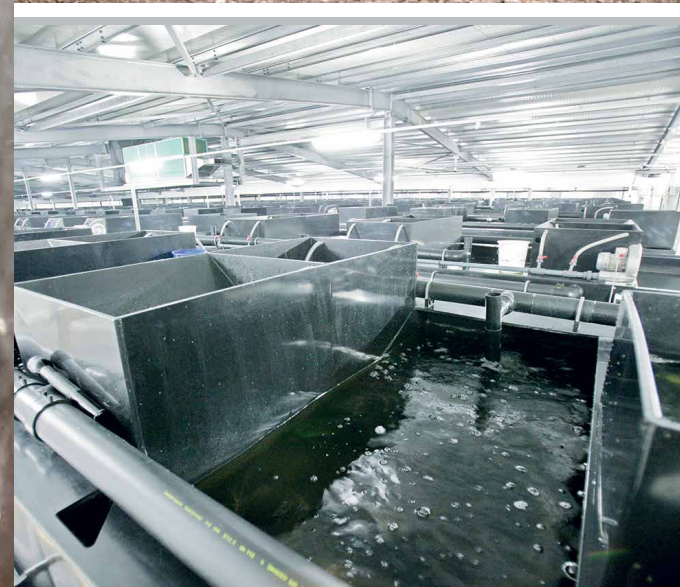

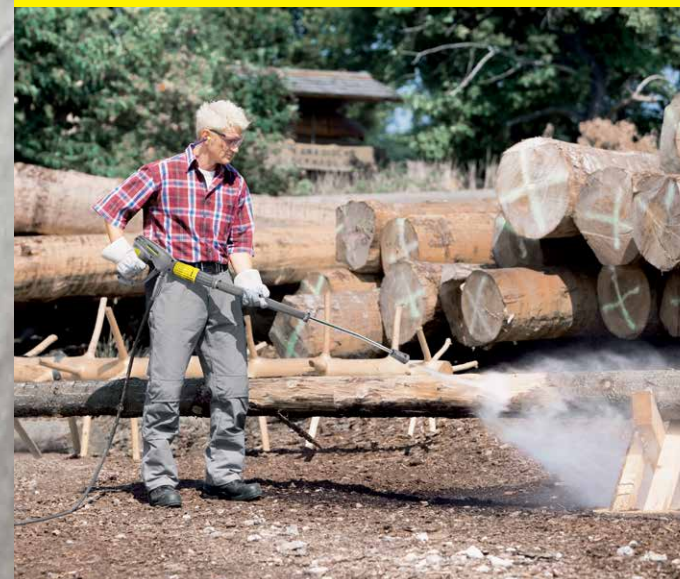

NT 48/1 wet / dry vacuum cleaner

An essential farm tool, the NT 48/1 wet / dry vacuum is ideal for cleaning vehicles and tractors, managing water spills or minor flooding, and keeping machinery free from dirt and debris to ensure equipment stays functional. Its powerful suction can be used to clean farm vehicles and tractors, removing wet and dry debris both inside and out reaching even the smallest areas.

AGRICULTURE EMBODIES VARIETY.

When you mention agriculture, most people naturally think of arable farming and animal husbandry. Yet agriculture has many other sides to it which modern cleaning technology has championed.

Forestry

High pressure instead of tedious work with a beveled bladed bark spud. Kärcher pressure washers reduce timber loss and damage from debarking, and are more effective and quicker at doing this. You can prevent pest infestations and accelerate drying at the same time this way.

Aquaculture

Our pressure washers and suitable accessories can easily clean breeding and rearing tanks. By doing so, you can achieve the cleanliness that the fish need in order to grow well and save yourself a lot of work time.

Mariculture - cleaning net pens

Netting accumulates growth and excrement, disrupting water flow and harming biomass in mariculture. Cleaning these net pens is costly, but Kärcher's high-pressure solutions offer an efficient and eco-friendly alternative. With high pressures and flow rates, you'll save time and money while improving the growth and health of your culture.

Viticulture

Lacking cleanliness in wine production can lead to unwelcome fermentation processes and, at worst, ruin a whole year's work. We have solutions especially adapted to viticulture, should you need them.

CLEAN ENERGY GAIN.

Keep consistently high electricity yield by cleaning solar modules with iSolar.

Dirt caused by dust, soot and pollen can reduce the output of photovoltaic systems and solar energy modules by 20 - 35%. Dust from fields especially and discharged air from animal accommodations can leave debris on modules lowering electricity output. The natural power of rain and wind are nowhere near strong enough to clean them effectively. This is why the systems need regular cleaning. Our iSolar cleaning systems make this effortless.

Our RM 99 Solar Cleaner is a residue-free cleaning agent that is perfectly adapted to the special module surfaces and especially suited to tackling heavy and greasy dirt. The solar panel cleaner removes dirt and limescale effortlessly and prevents the formation of limescale patches after drying.

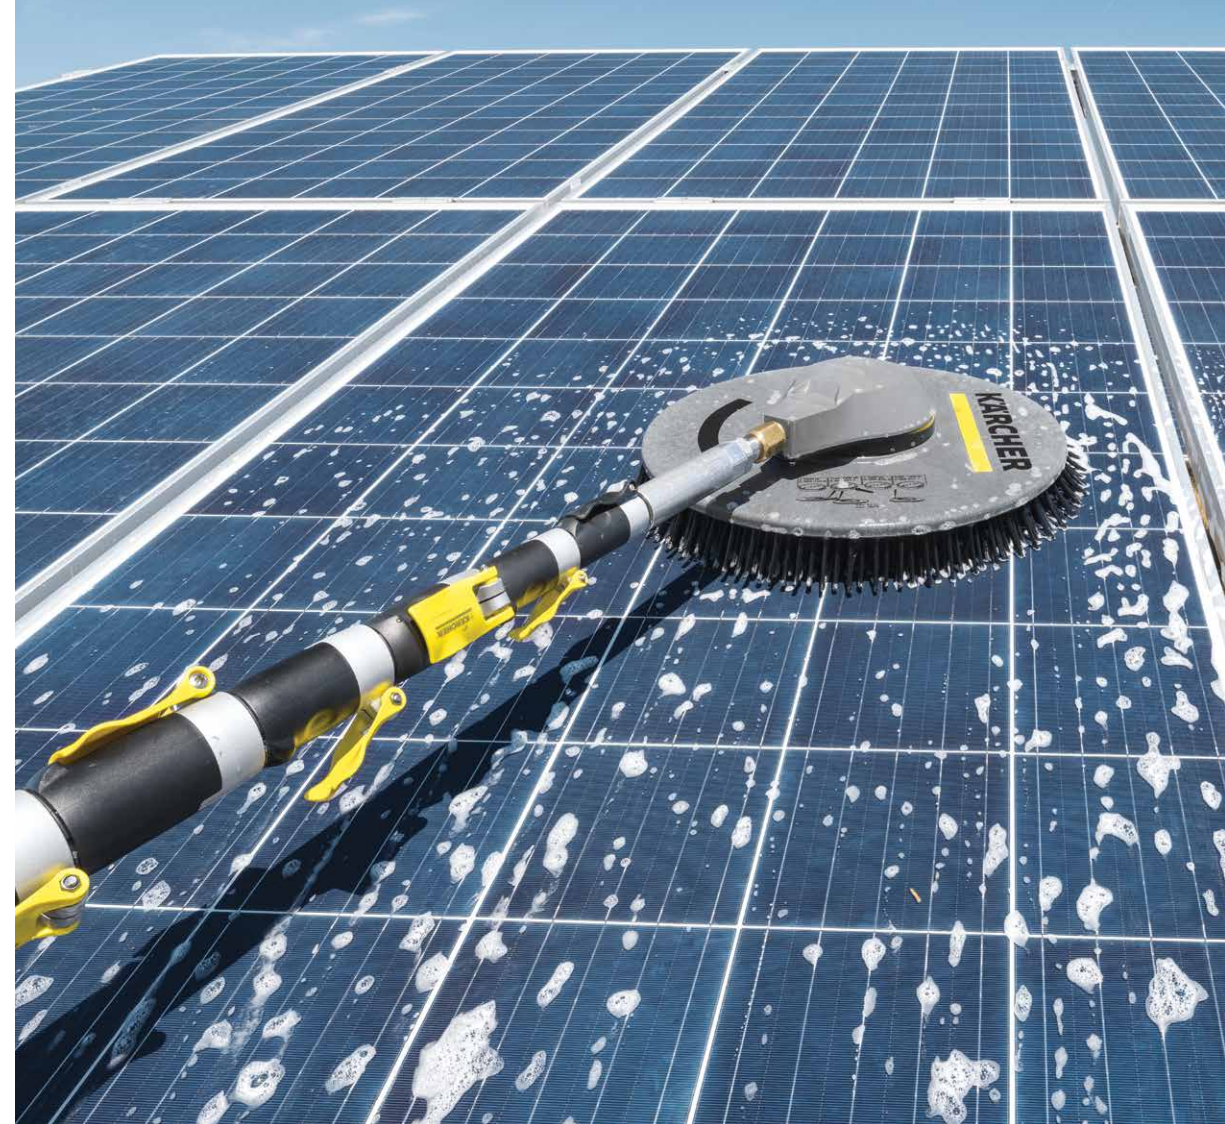

Achieve sustainably clean solar modules and maximum energy yields with iSolar.

Less dirt – higher yields

Every type of dirt results in a loss of power and less feed-in compensation. Cleaning with iSolar achieves amortization very quickly. The iSolar accessory system is a modular system and compatible with many Kärcher high-pressure cleaners. In most cases this means that you can continue to use your existing high-pressure cleaners with iSolar and reap twice the rewards.

Operator safety

The fall protection device consists of a harness around the pelvis and shoulders, which is connected to a kernmantle rope. The device hooks in immediately in the event of an emergency and safely catches the user.

iSolar and RM 99 Solar Cleaner

iSolar is modular and compatible with numerous Kärcher pressure washers. Kärcher iSolar includes all the products you need – from the water connection and the cleaning brush to the telescopic lance. When paired with RM 99 Solar Cleaner, elements dry off on their own without streaks and rinsing is not necessary.
