

KÄRCHER

DIRTY SITES CAN COST YOU.

There's Kärcher for that.

PROFESSIONAL | CONSTRUCTION

KEEP YOUR SITE CLEAN AND EASIER ON YOUR WORKERS.

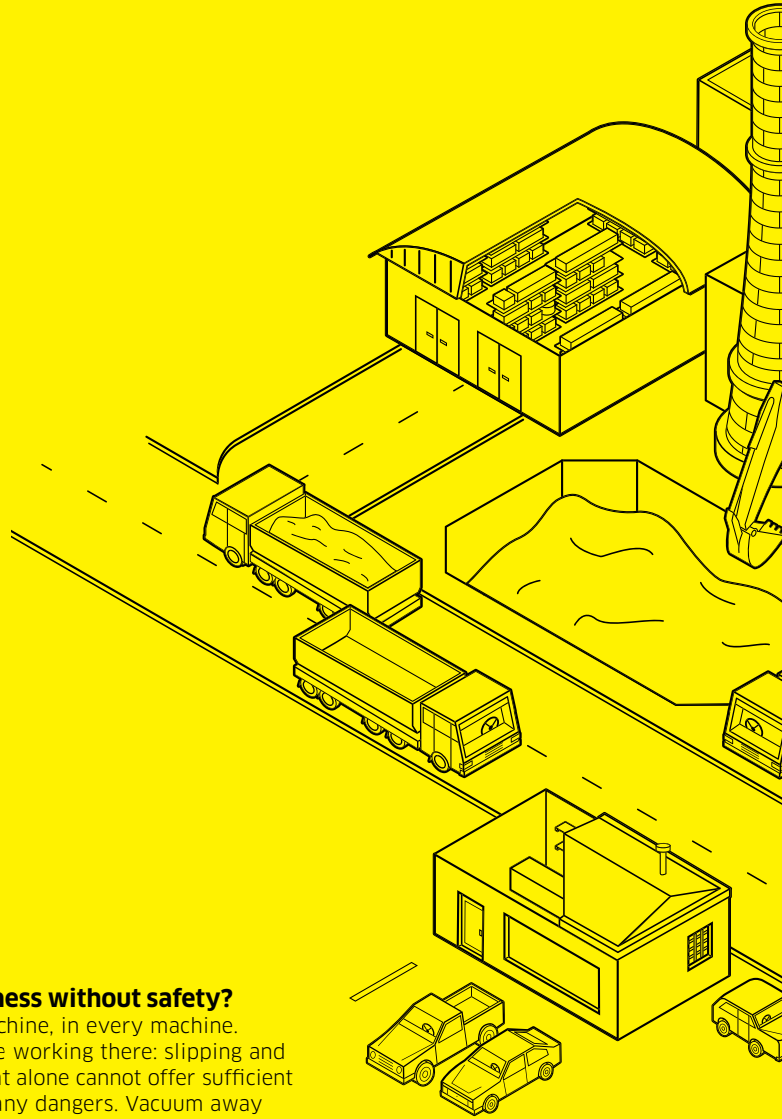

At Kärcher, cleaning is our job as well as our passion, and we take our responsibility towards people, culture and the environment seriously. We are a family owned company and have been producing quality equipment for over 80 years. We are working on new solutions – full steam ahead, just as we always have. Whatever the cleaning task, we have the solution.

Construction sites are held to higher cleaning standards and regulations. Reliable and effective machines are essential when it comes to removing the various types of dirt found in the construction industry. Whether for vehicles, machines, facades, or floor cleaning, with Kärcher's efficient solutions, you are always ideally equipped. After a hard day's work, cleaning should be effortless.

CLEANER IS ALWAYS SAFER.

What use is performance without reliability? What use is robustness without safety?

On the construction site, you need all of these characteristics in a single machine, in every machine. Every construction site is different. There will be different dangers for those working there: slipping and tripping hazards, health risks due to dust and chemicals, and so on. A hard hat alone cannot offer sufficient protection. Kärcher Professional cleaning solutions can reliably eliminate many dangers. Vacuum away dust and dirt regularly, or as soon as it appears.

Outside Areas

Effective sweeping with walk-behind and ride-on sweepers. Clean facades and surfaces with cold and hot water pressure washers.

Equipment

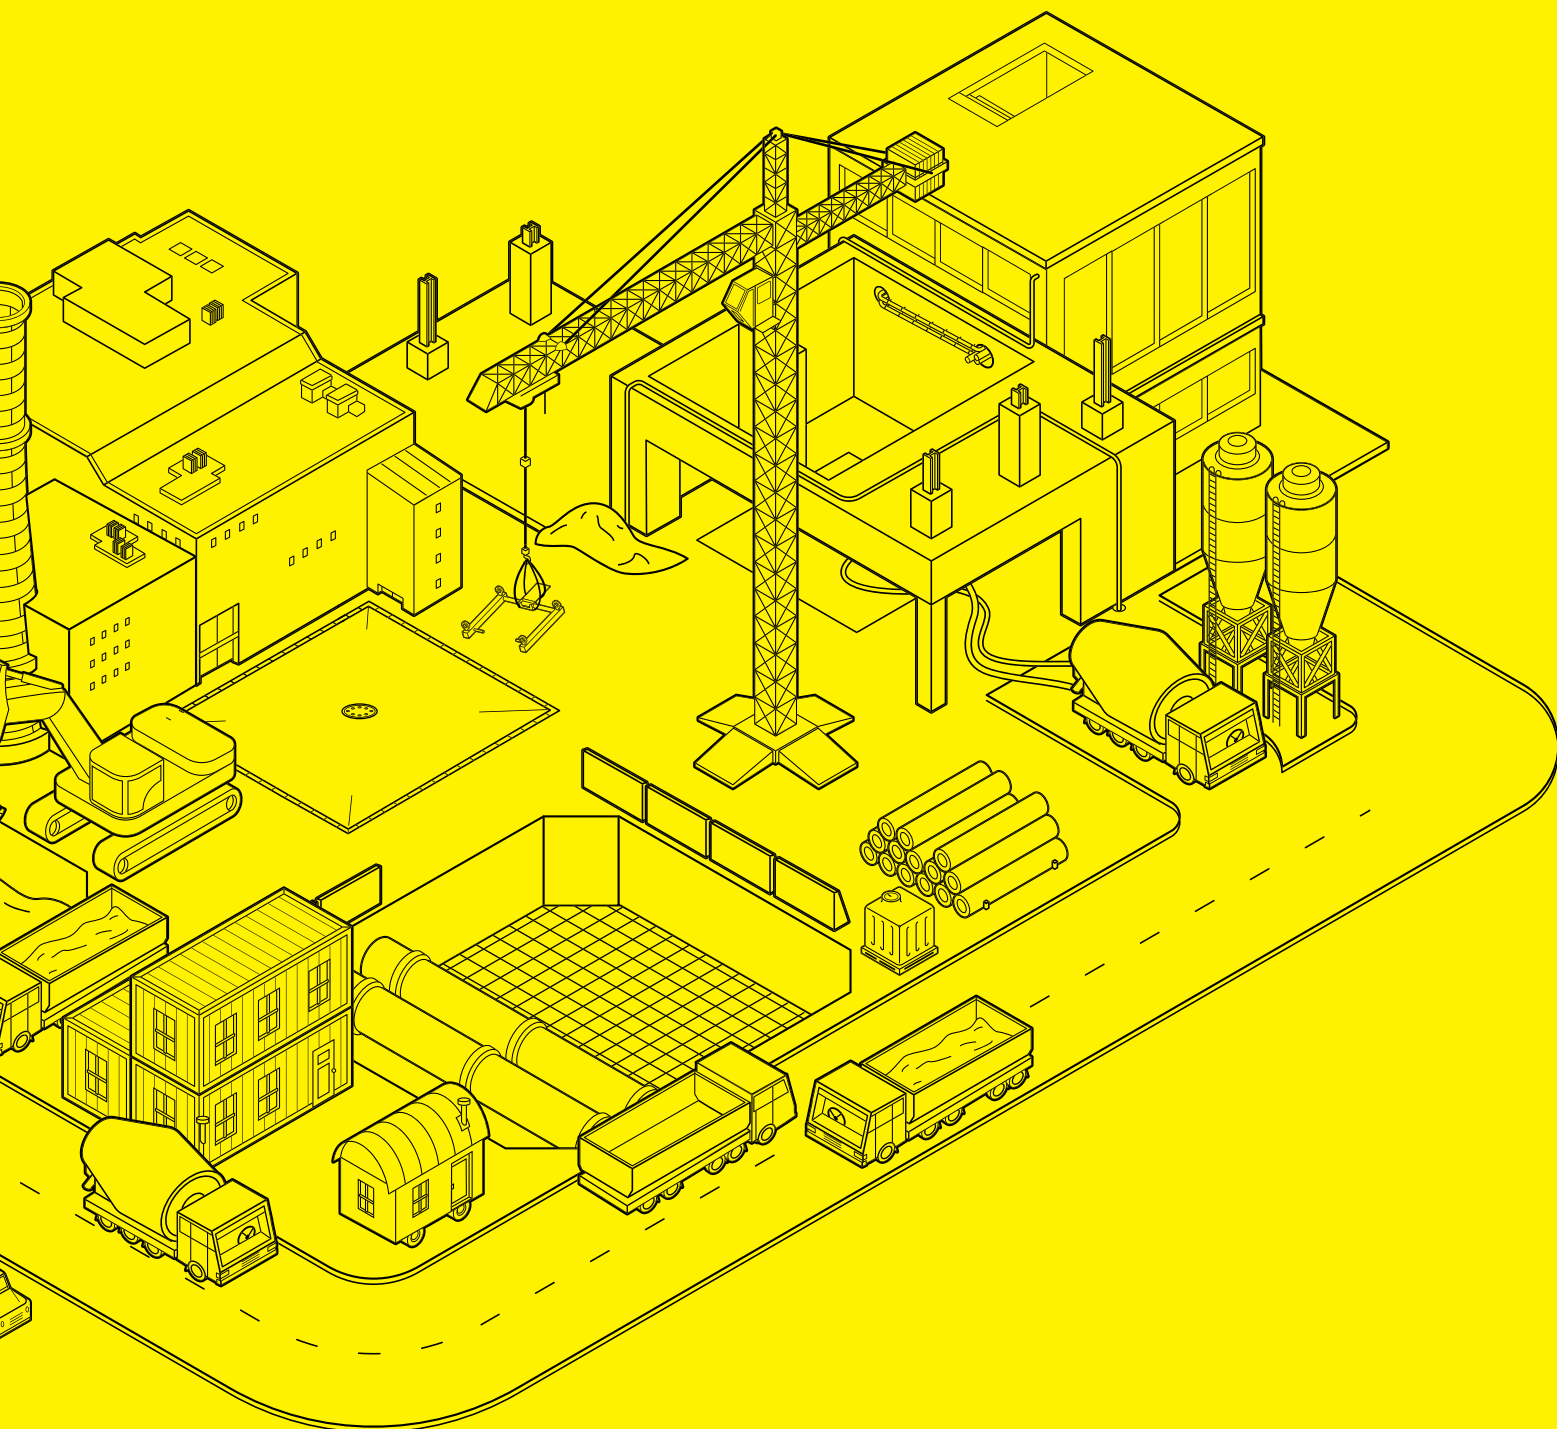

Effortless cleaning of heavily contaminated construction equipment. Hard on dirt, gentle on surfaces and seals. Low-effort work thanks to the patented EASY!Force trigger gun.

Buildings

Comply with OSHA with the latest filter engineering in our wet/dry vacuums. Skip the broom and instead use sweepers to remove dust without creating dust.

Wash Bays

Clear away dirt in no time. Wash your vehicles quickly and economically with powerful pressure washers – both mobile and stationary. Tie in the Kärcher Foamer Max and cut chemical usage by half.

FOAMER MAX
IN ACTION**

WASHING AWAY HAZARDS.

Maintaining a clean and organized construction site, particularly in outdoor areas, is paramount for both safety and operational efficiency.

Construction work inevitably generates a wide variety of debris, from heavy mud and concrete residue to fine dust, metal splinters, paint, and oil deposits. Neglecting these can lead to hazardous conditions for workers and even result in costly accidents. Proactive cleaning with the correct equipment ensures a safer working environment and smoother project progression.

Regular and thorough cleaning of outdoor areas is a critical investment in site safety. By removing hazardous debris and preventing the accumulation of dirt, you minimize slipping hazards and ensure clear visibility. This commitment to cleanliness reduces the risk of accidents, extends the operational life of valuable tools, and ultimately contributes to a more efficient, compliant, and productive construction site.

Tackling dust and dirt

Wet and dry vacuum cleaners are your indispensable, versatile aids for fighting dust, wet dirt and fluids everywhere on the site. Our special cleaning agents gently clean your entire vehicle fleet and keep them protected for long periods of time – for sustainable protection and value retention.

Tough grime, powerful solutions

For ingrained dirt and stubborn deposits on outdoor surfaces, pressure washers are indispensable. These powerful machines efficiently remove mud, caked-on concrete, paint residue, and other heavy grime with minimal effort, often without needing harsh cleaning agents. Their high pressure and flow volumes blast away stubborn build-up from shovels, chutes, vehicles, and pathways. Mobile pressure washers offer exceptional flexibility, allowing teams to quickly transport them to different areas of the site, ensuring comprehensive cleaning wherever it's needed.

Walk-behind sweeper

NT 48/1
Wet/dry vacuum

A large Deere 50828 excavator is shown in profile, working on a pile of large, light-colored rocks. The excavator's arm is extended upwards, and its bucket is partially visible at the bottom left. The background is a dramatic sky with soft, colorful clouds in shades of orange, pink, and purple, suggesting a sunset or sunrise. The overall scene conveys a sense of heavy construction work in a rugged environment.

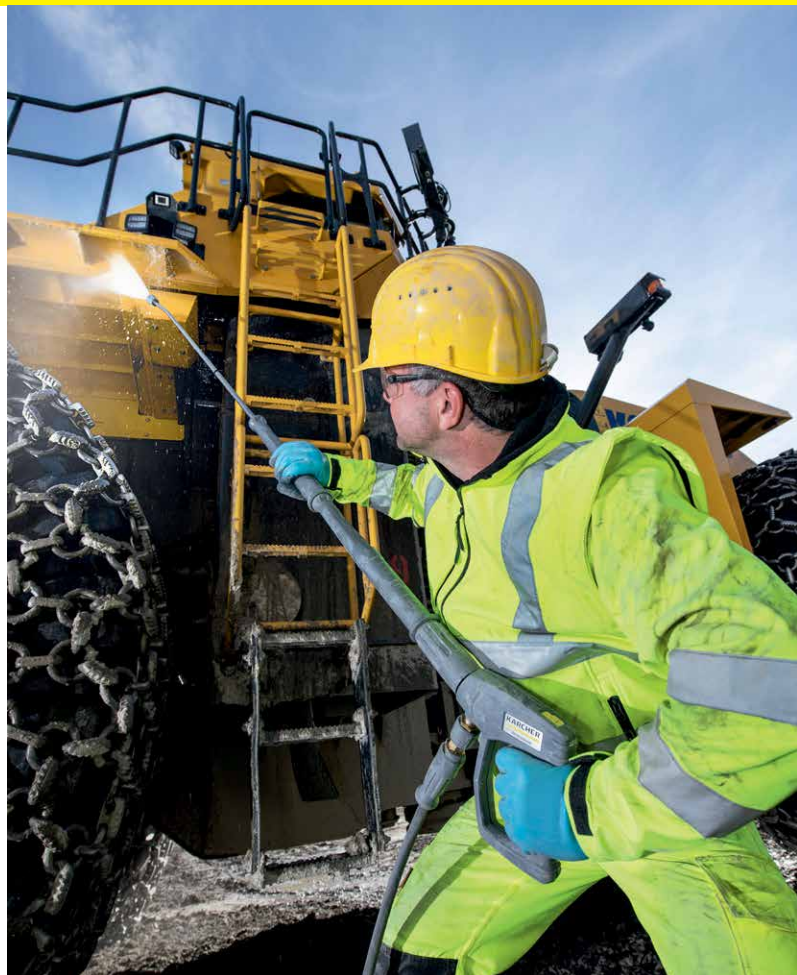

YOU MOVE THE EARTH, WE'LL HELP REMOVE THE DUST.

Construction machines cloaked in thick layers of dirt tell tales of hard labor. Protect your investment and ensure operational readiness with Kärcher.

Hundreds of pounds of earth, mud, and clay, splashes of paint and lacquer, dried concrete: Construction machines get covered in vast quantities of dirt during operation.

Both on and off the construction site, cleaning measures play an essential part: to preserve function and retain value, as a precondition for maintenance and repair, to protect employees and to ensure workplace safety.

By keeping your machines clean, you're not just maintaining their function, you're also preserving their value. Cold- and hot-water, high pressure, appropriate cleaning agents, the list of possible methods is long.

Importance of cabin cleaning

Cleaning equipment cabins is essential for maintaining employee safety and promoting a healthy workplace environment. Thoroughly vacuuming protects sensitive electronics, improve air quality for operators, and ensure optimal visibility to prevent accidents and damage.

Cleaning at the yard

When construction machines return to your yard or rental fleet after a job, thorough cleaning is essential for maintenance and repairs. Our stationary hot water pressure washers are ideal for wash bays, achieving superior cleaning results more quickly than cold-water methods. For stubborn oily or greasy dirt, specialized chemicals can be used to enhance effectiveness.

Mobile high pressure cleaning

Keep your construction machinery fully operational with our mobile pressure washers, designed for fast and efficient dirt removal on-site. These robust units offer powerful cleaning with high flow rates and various nozzle options, ensuring your equipment is ready for any task.

The Kärcher CleanWave battery-operated pressure washer trailer, complete with its own water tank, offers unparalleled mobility and convenience for cleaning anywhere on the construction site, eliminating the need for external power or water hookups. This pioneering solution provides immediate, powerful cleaning capabilities wherever they are needed most.

HDS Special Class hot water pressure washer

The clever ecoefficiency mode, paired with highly effective boiler insulation, reduces energy consumption by up to 40% during standby, resulting in significant cost savings and environmental benefits on job sites.

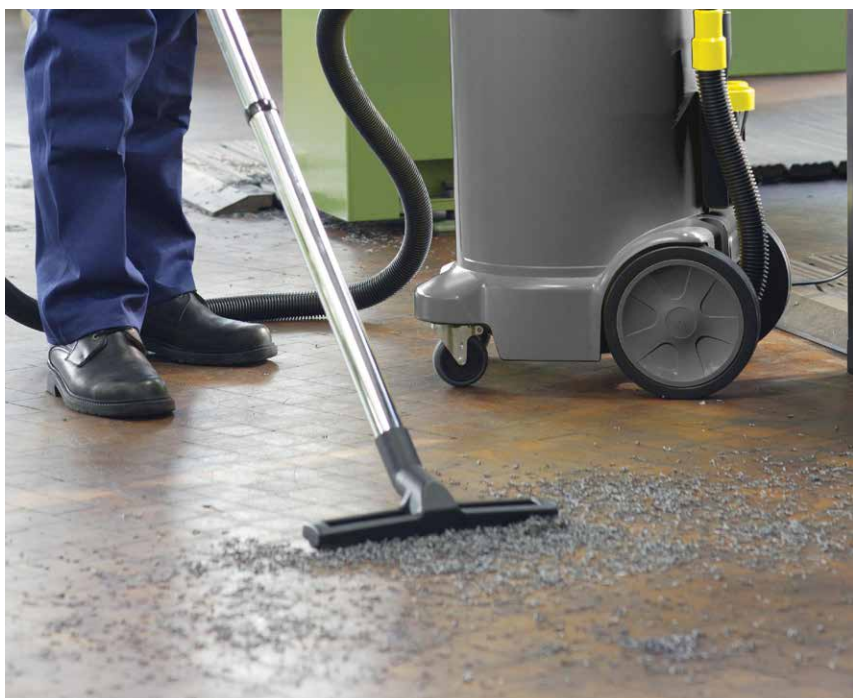

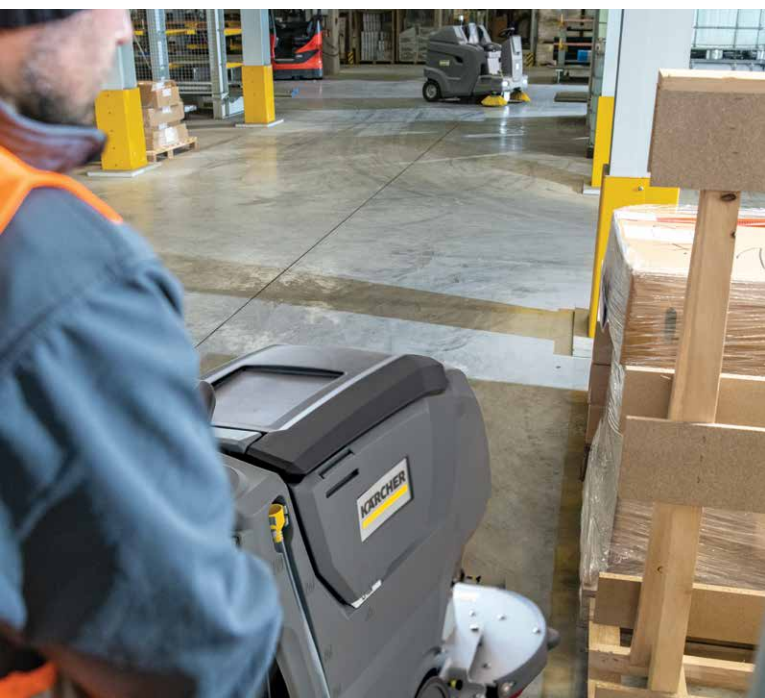

EXCEEDING STANDARDS, TOP TO BOTTOM.

The final stage of construction cleaning demands meticulous attention to detail, transforming a dusty site into a pristine, ready-to-occupy space.

Beyond aesthetic appeal, addressing the wide range of dirt and residues – from paint splashes and cement film to the pervasive construction dust – is crucial for health and safety, particularly in light of OSHA's crystalline silica dust standards. These regulations mandate strict limits on worker exposure, making efficient dust removal a top priority. We have specifically designed our equipment to help you comply with these critical safety requirements.

By cleaning in the direction dust falls and water flows – our advanced vacuums and sweepers capture fine silica particles at their source. This systematic approach ensures thorough removal, significantly reducing airborne dust levels and minimizing worker exposure to hazardous respirable crystalline silica. Prioritizing comprehensive dust extraction not only prepares the building for occupation but also safeguards your team and ensures regulatory compliance.

Vacuums and sweepers

Beyond the obvious interior spaces, vacuums and sweepers are invaluable for preparing exterior areas, such as driveways and yards. Sweepers efficiently clear paved surfaces, and when combined with pressure washers, they can tackle even the toughest dirt on facades and walls. This comprehensive approach ensures that both the inside and outside of the building meet the highest standards of cleanliness.

Scrubbers

For larger areas and stubborn layers of dust on hard floors, scrubbers offer a highly effective solution. These machines deliver far superior results compared to manual wiping. Scrubbers quickly clean the floors with fresh water and immediately vacuum up the dirty residue, resulting in significantly shorter drying times and allowing the floors to be walked on soon after cleaning.

Wet / dry vacuum cleaners

These versatile machines remove everything from fine mineral dust to larger particles, ensuring thorough cleanliness.

KM 75/40 walk-behind vacuum sweeper

The Kärcher KM 75/40 walk-behind vacuum sweeper is invaluable for final construction cleaning due to its ability to collect both fine dust and larger debris efficiently. Its integrated suction and highly efficient filter system ensure a virtually dust-free cleaning process, creating a healthier environment and preparing surfaces for immediate occupancy.

**THE DIRTY TRUTH:
A WASH BAY IS
MORE PROFITABLE.**

At the yard, dedicated wash bays equipped with hot water pressure washers expedite turnaround. An integrated setup eliminates the time users waste on portable equipment and hose management because water and power are readily available and tied directly to the building. Streamlined efficiency ensures that deep cleaning is quick and effective, allowing for faster servicing and repairs, so you are ready for the next job.

Stationary high-volume pressure washers

Wash bays equipped with hot water and high-pressure cleaning systems are essential for efficiently cleaning heavy construction equipment after demanding work phases. These bays tackle challenging grime like mud, clay, dried concrete, and oil, allowing for thorough maintenance and repairs. Hot water enhances cleaning efficiency by softening grease and dirt and reducing equipment downtime and maximizing productivity. Regular cleaning extends the lifespan of machinery by preventing wear and tear from accumulated dirt and corrosive substances, ultimately preserving equipment value and lowering maintenance costs.

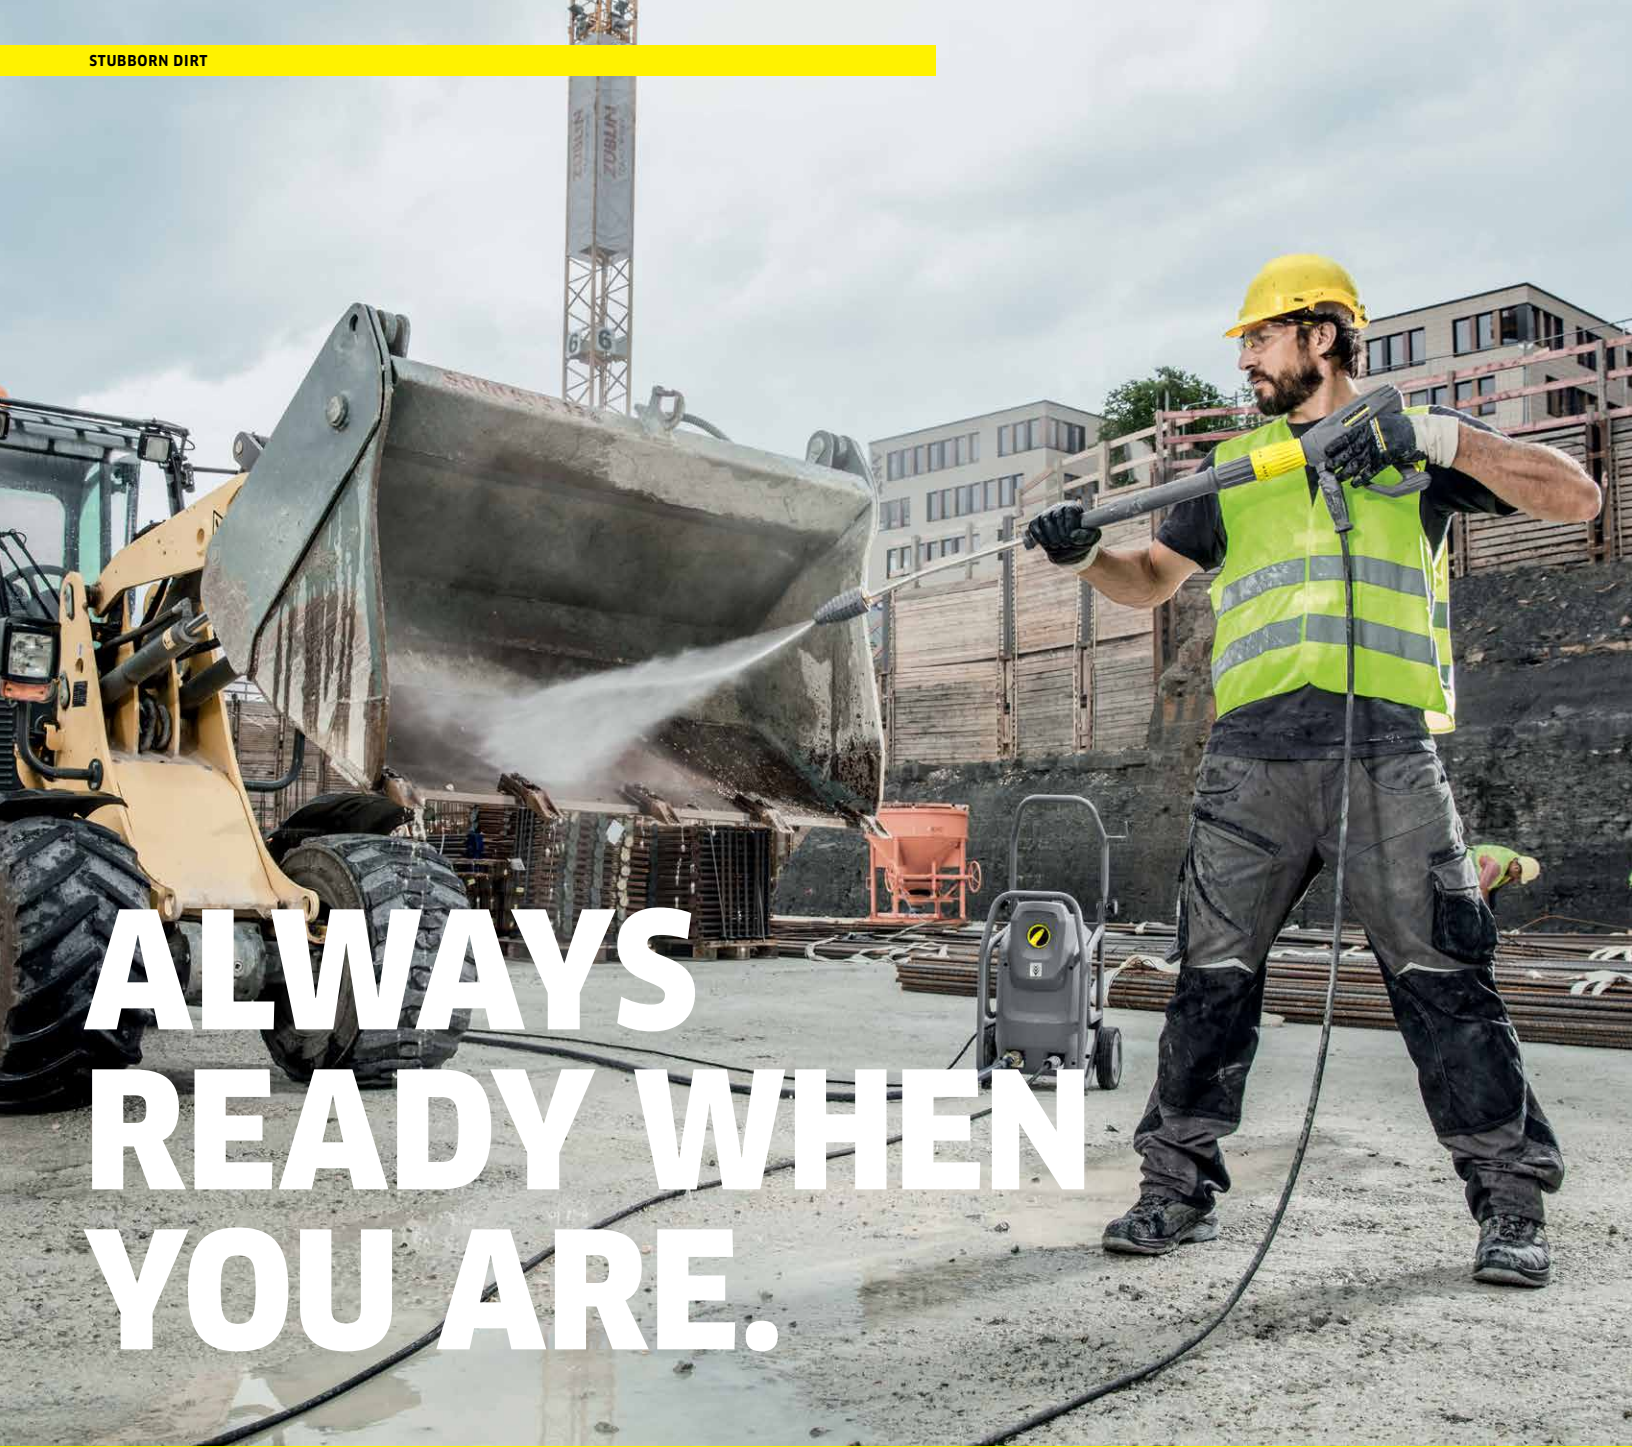

Safety

Maintaining clean machines also enhances workplace safety by ensuring visibility and secure footing for operators while allowing mechanics to inspect equipment without obstruction. Furthermore, a clean fleet reflects a company's professionalism and commitment to quality, potentially attracting more business and ensuring compliance with industry regulations.

Excels in construction wash bays delivering powerful hot water at high flow rates. This industrial-grade performance, combined with its durable, U.S.-built construction and a 7-year pump warranty, ensures reliable and efficient deep cleaning for a fleet's demanding needs, even accommodating multiple users simultaneously for increased throughput.

Secura NG/LP Series hot water pressure washer

ALWAYS READY WHEN YOU ARE.

Cleaning heavy equipment can be a dirty job. To comply with OSHA regulations, we make it easy to clean vehicles entering and exiting the job site, as well as all other heavy equipment. Dirt adhering to machines, tools and other equipment not only looks scruffy. It also affects readiness for use and reduces value retention.

Concrete and paint residues, as well as remains of building materials on machines and equipment, ultimately cause damage due to corrosion, thus incurring service costs and causing dreaded downtime, reducing availability.

Hot- and cold-water pressure washers from Kärcher easily remove such residues. And, thanks to the adjustable water pressure and volume, they are always tailored to the task. So your investment will retain its value with minimum effort.

Mobile. Whatever the size

Smaller pressure washers are naturally also suitable for use on scaffolding and can be easily carried. You can simply carry the larger equipment to the right place by crane. Appropriate suspension attachments are, of course, integrated.

Accessories. Tailor-made

With the right nozzles, only the dirt is attacked, and not the surface. And our surface cleaners for facade and floor cleaning already have the right suction device for dirty water.

Working. But comfortably

Our EASY!Force high-pressure gun protects the health of the user. And, thanks to servo control, it ensures easy adjustment of water pressure and volume to the cleaning task in accordance with requirements.

HD Mid Class Cage Series

Designed for commercial use under challenging conditions, the HD Mid Class Cage cold-water pressure washer delivers a robust cleaning performance and energy efficiency. Its powder-coated steel frame and durable components ensure reliable operation in both vertical and horizontal applications.

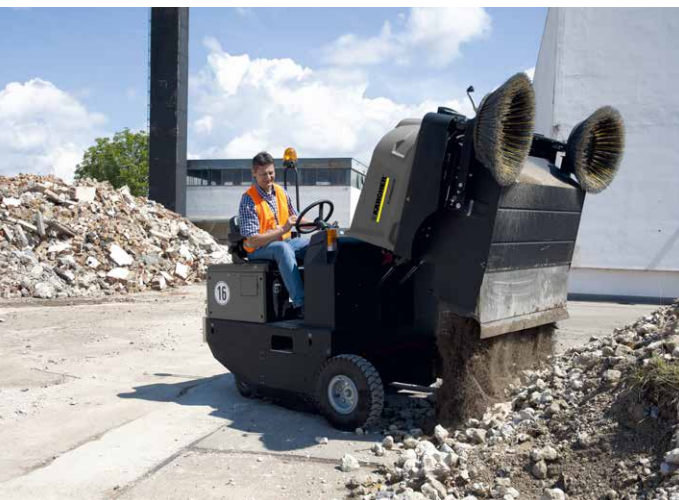

THE POWER OF MOVING BEYOND THE BROOM.

Construction sites, building projects, and warehouses often deal with substantial amounts of coarse dirt. Promptly addressing this issue is essential for maintaining a safe and efficient work environment, allowing for smoother operations and enhanced productivity. Let's tackle it together to keep your site safe and efficient!

Coarse dirt can pose significant tripping and slipping hazards, making it essential to address this issue promptly. Our sweepers and vacuum sweepers offer ideal solutions for this problem. We provide a range of options, from basic manual push sweepers to fully hydraulic industrial ride-on models with four-wheel

drive. These machines efficiently and effectively remove coarse dirt, enhancing safety and helping to maintain a productive work environment. Additionally, using a direct throw sweeper can achieve excellent cleaning results for uneven surfaces and large amounts of fine dust.

Sweepers and vacuum sweepers

You have fantastic options for coarse dirt removal, tailored to your location and available space! Imagine machines that are ready to go at the push of a button—no setup time needed! They're designed to be highly maneuverable, user-friendly, and tough enough for the most demanding tasks. The main sweeper rollers can be finely adjusted to ensure you get the best cleaning results possible.

For areas where a broom slows you down, push models are a smart choice. For larger spaces, ride-on machines not only clean faster but also save money compared to using multiple staff. Plus, with their advanced filter systems, vacuum sweepers operate in a nearly dust-free environment, making your cleaning experience smoother and more effective!

KM 170/600 R D Classic

Engineered for the most demanding heavy-duty applications, the robust diesel-powered KM 170/600 R D Classic delivers exceptional cleaning performance on large areas with a 67" cleaning width and powerful four-wheel drive. Its intuitive operation and advanced filtration system maximize productivity and operator comfort while meeting stringent emission standards.

TAKE IT EASY.

Zero holding strength. No tiring. No stress. And still the best.

With our EASY!Force high-pressure gun, we have defined a new dimension in the ergonomics of pressure washing. Nothing less, no exaggeration. Both the patent and independent testing confirm.

Our patented EASY!Force high-pressure gun will relieve the strain on your joints and muscles noticeably.

Kärcher Sludge Slinger trash pump water pump

An indispensable tool for managing challenging water conditions on construction sites. Engineered to handle large volumes of water contaminated with solids like mud, sand, and gravel, it ensures rapid dewatering of trenches, flooded areas, and foundations. This robust pump's ability to move such demanding mixtures prevents costly delays and keeps your project on schedule, even in the toughest conditions.

Kärcher eco!Booster

Advantageous for construction sites, the eco!Booster provides up to 50% higher cleaning performance and area coverage compared to standard nozzles, drastically reducing the time and effort required to clear dust, dirt, and debris. This increased efficiency translates directly into substantial savings in both water and energy consumption, making site clean-up faster, more sustainable, and ultimately more cost-effective throughout the project lifecycle.

What makes EASY!Force so special for users.

In a nutshell: the holding force for the trigger is zero. Sounds like magic? Almost. But it's simply very clever use of physics, for EASY!Force uses the energy from the recoil force of the high-pressure jet. Joints, muscles and the whole body are protected, the risk of injury and non-scheduled breaks due to fatigue are reduced and ultimately productivity is increased.
